

VIP-round steel link chain VMK 10x30 - pink

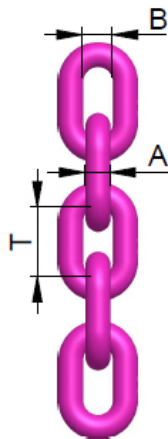

Artikel-Nr: 7100479

RUD grade 100 or VIP sling chains are made from CrNiMo steel. The inhouse made special heat treatment gives the grade 100 round steel link chain a high toughness even at the high strength of the material. A clear visual characteristic is the fluorescent PINK® powder coating. A quality criteria of the VIP chains is the certification acc. to the DGUV (BG) guidelines, which are orientated to EN818 and PAS 1061 and therefore the chains are embossed with the H1 marking. This stamping is located in short chain link distances and it tells that the testing guidelines are observed and that RUD was the first manufacturer who received the grade 100 certification. Additional customer specific testing methods are possible on request. For the necessary quality approval there are manufacturing and batch numbers in regular distances stamped into the chain links. By this consistently identification possibility, evidence regarding the manufacturing and testing is guaranteed for a period of 10 years. VIP chains are adapted regarding the geometrical design and the tolerances according to the higher quality grade. A big advantage of the sling chain is reflected by the high energy absorption, which is secured by a minimum elongation at fracture of 25% for a natural black chain and min. 20% for a powder coated chain. In addition to that, sling chains are less sensitive regarding cracks compared to other lifting means. VIP quality in PINK® therefore stands for a high dynamic grade 100 chain made by RUD which is less sensitive regarding mechanical wear and damages which leads to a longer lifetime.
