

BANKSMAN HARNESS KITS

Wiring harnesses significantly enhance the efficiency and durability of commercial vehicle lighting systems. Their pre-assembled design makes the installation easier, faster and more robust.

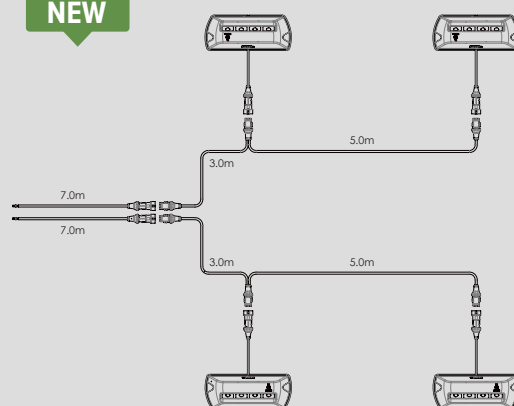

With environmental protection in mind, they shield against moisture, heat, and vibration, boosting overall reliability. Adhering to industry standards, the Labcraft wiring harnesses ensure consistency and compatibility, simplifying part replacements and upgrades resulting in less vehicle downtime.

These combined benefits, including cost-effective installation, improved reliability, and reduced maintenance costs, highlight the value of incorporating wiring harnesses in commercial vehicle lighting systems.

Suitable for:

- Rigid
- Trailers

NEW

**Drawings and measurements will vary depending on vehicle*

BM4

Perfect for fire engines, trailers, horse boxes and vehicles with low-set bodywork.

630 lumens

Waterproof - IP67

5-year warranty

ECE R10 & R23 approved

Vertical surface installation for greater versatility

PRODUCT	PART NO.	VOLTAGE	WATTS	CURRENT	LUMENS	DIMENSIONS	FIXING CENTRES
BM4	BM4_2-3MV	10-32V	6W	12V @ 0.45A 24V @ 0.24A	630lm	95 x 64 x 33mm	78mm

BM6

Perfect for smaller vehicles and trailers. The BM6 can also be a more affordable option.

630 lumens

Waterproof - IP67

ECE R10 & R23 approved

5-year warranty

PRODUCT	PART NO.	VOLTAGE	WATTS	CURRENT	LUMENS	DIMENSIONS	FIXING CENTRES
BM6	BM6_2-3MV	10-32V	6W	12V @ 0.45A 24V @ 0.24A	630lm	131 x 86 x 30mm	117mm

WHAT IS UNECE REGULATION 23?

Uniform Provisions Concerning the Approval of Reversing and Manoeuvring Lamps for Power-driven Vehicles and their Trailers. By definition a "Manoeuvring lamp" means a lamp used to provide supplementary illumination to the side of the vehicle to assist during slow manoeuvres. Manoeuvring lamps should be installed in accordance with UN ECE Regulation 48 and the manufacturer's instructions. This helps prevent other road users being dazzled by the lights.
