

IMK 13x39 : Chaîne en qualité exceptionnelle ICE - ice-pink

Artikel-Nr:

7996118

ICE-Round steel chain are manufactured and tempered with a patented material. They have a high hardness and are insensitive to hydrogen embrittlement like Grade 10 chains.

The application of the RUD-Grade 12 is issued by the BG and is stamped with "D1-12". D="Degree of Quality", 1 is the manufacturers number 1 = RUD. 12 is the corresponding Grade 12.

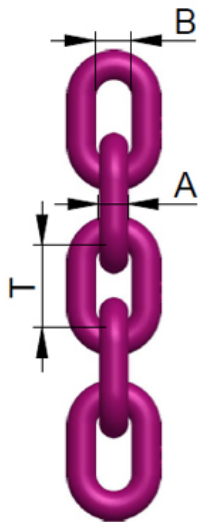

Surface: ICE-Pink powder coated.

Quality certificate: At regular intervals there are stamped the production and batch numbers. Due to these identification possibilities, it can be guaranteed a complete evidence of the production and test data, also after 10 years. We stand by our chain quality in all Grades.

- ICE-Chains are adapted to the tolerances of the higher Grade of its geometric construction.
- Material: patented CrNiMo-Stainless steel, especially tempered, high hardness, - Min. ultimate elongation: natural black min. 25 %, pink coated min. 20 %.
- Less sensitive to notching and hydrogen embrittlement than quality Grade 8.
- The bending test according to the standard specifications of DIN EN 818-2, bending min. $f=0.8xd$ is by far exceeded.
- The ratio of the WLL to the manufacturing proof load and to the breaking strength is given by 1 : 2, 5 : 4
